***Election/Restrictions***

1. This application is in condition for allowance except for the presence of claims 17-44 to the invention non-elected without traverse. Accordingly, claims 17-44 have been cancelled. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

**REASONS FOR ALLOWANCE**

2. The following is an examiner's statement of reasons for allowance:

The prior art does not show or fairly suggest the claimed invention of a composition of matter and an optical apparatus utilizing the composition having the claimed structure and claimed limitations, wherein a rejection under 35 USC 102 or 103 would be improper. Please particularly note the combination of claimed elements and claimed limitations, including, as recited in claim 1, the classifier combines with the electro-optic material chemicals, wherein at least one of the chemicals bonds with the classifier so that the resulting material is less responsive to an electric field; also as recited in claim 7 and 14, the second portion comprises the electro-optic chemicals of the first portion and a classifier, so that the second portion has a refractive index which is less responsive to an electric field than that of the first portion.

Therefore, in light of the Applicants' arguments and/or amendments, the claimed invention is considered to be in condition for allowance as being novel and nonobvious over the prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

***Conclusion***

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

The following are U.S. patents and U.S. patent publications which teach an optical switch of two portions comprising an electro-optic material, but does not teach utilizing a classifier to change the response of the material under an electric field:

Haertling	U.S. Patent Publication 2002/0171904
Romanovsky	U.S. Patent 6,310,712 B1
Romanovsky	U.S. Patent 6,381,060 B1

And Romanovsky (U.S. Patent Publication 2003/0063363), which shares the same priority document, provisional application 60/288,757, and incorporates by reference the current U.S. patent application. The related patent applications are continuations-in-part, and do not teach the claimed invention.
